Fall 2026 · Tactic week Wed 23 – Tue 29 Sep 2026

github.com/samquansah-algo/nbc-vct · [live PMR CRM](#)

Seven in ten 10-year-olds in low- and middle-income countries can't read a simple text. And as AI makes answers free, the chance to build, test and fail with real things is still scarce.

NBC gives after-school and holiday programme owners, starting in Cape Coast, Ghana, ready-to-run **Learning Worlds**: hands-on projects with low-cost programmable kits, a facilitator guide and shared AI. Children aged 9 to 12 build real skills, and owners can show families what each child can now do.

Built on five years of Algo Peers programmes in Cape Coast. Stage: pre-seed.

Sources: [thesis v5](#) · [learning_poverty_\(World Bank\)](#).

Experiment Outline

Part 1: What do you want to get out of this tactic?

Find one recurring learning problem painful enough that programme owners would change their programme or pay for help, and learn who decides and who pays.

Part 2: What is your hypothesis for this tactic?

H1 Owners can't easily tell whether a child can use an idea in a new task. **H2** Hands-on sessions stop when the one skilled facilitator is absent.

H3 Owners would pay for reusable experiences that cut preparation. **H4** Parents value seeing how their child tackles a challenge, not scores.

Part 3: What experiment do you want to run for this tactic?

Reach 10 watering holes with 10 first messages, then 10 revised ones, and run 10 problem interviews (Wed 30 Sep – Tue 6 Oct), rating five problems in an insights grid. No pitching until the problem is clear.

Sources: [hypotheses and script](#) · [v5 playbook](#)

PMR script, questions 1–5 (1 of 2)

#	QUESTION	TESTS
1	Walk me through the last practical learning session you ran.	Context
2	Tell me about the last time a child finished an activity but you weren't sure what they understood.	H1
3	What did you do next? What did that take?	Workaround
4	Show me how you record progress or explain it to a family.	H4
5	Describe a time a learner used an idea successfully in a different activity.	Transfer

Adults only, with consent. Ask for real, recent examples before any mention of NBC. A compliment is not a buying signal.

Sources: [interview script](#)

PMR script, questions 6–10 (2 of 2)

#	QUESTION	TESTS
6	What makes practical sessions hard to repeat with another facilitator?	H2
7	What have you paid for to improve this programme? How was that decided?	H3
8	Which tools or routines work well enough that you'd keep them?	Alternatives
9	(Only after the problem) Here is a scoped pilot. What would have to happen for it to fit?	Offer
10	What is the actual process for approving money, delivery and a start date?	Who pays

Logged after each call: role, setting, problem in their words, workaround, cost, who buys, budget process, next step, and ratings for problems P1–P5.

Subject: Robofest congratulations, and a question about your clubs

Dear [Name], congratulations to the Ghana Robotics Academy Foundation and Mikrobot Academy on the 2026 Robofest Junior title. I'm Sam Quansah, founder of Algo Peers in Cape Coast. I'm speaking with people who run recurring robotics or STEM clubs about how you tell whether a child can use what they learned when a new challenge looks different. Could you introduce me to two or three club coaches or owners for a 20-minute conversation?

P2 · Email

Scheduled · Mon 28 Sep

Subject: A research question on keeping hands-on sessions going

Dear Ghana Code Club team, I'm Sam Quansah, founder of Algo Peers in Cape Coast. I saw your launch of the "Coding & AI Without Computers" kits. Our programmes overlap, so to be open: this is research, not a sales pitch. I'm learning how facilitators keep hands-on sessions going when a trained facilitator moves on. Would someone who supports your facilitators talk for 20 minutes?

To: Ghana Library Authority, Programme Office · [open ↗](#)
Subject: Request for a 20-minute conversation with a librarian

Dear [Programme Office], I'm Sam Quansah, founder of Algo Peers in Cape Coast. I read about the Authority's children's coding bootcamp and librarian training. With your permission, I'd like a 20-minute conversation with a librarian who has run these sessions, about what helps them continue with limited devices and what children can still do weeks later. I'd share a short summary.

Hello everyone. With the admins' permission: I'm Sam Quansah, founder of Algo Peers and a Harvard GSE student (my own research, not a Harvard project). Can you recall a recent maker session where a child finished a project, perhaps with a tutorial or AI helping, and you weren't sure what they could do on their own next time? A 15–20-minute call would help.

Subject: 20 minutes of critique on a transfer-task study?

Dear Dr [Name], I'm Sam Quansah, founder of Algo Peers and a Harvard GSE student, writing independently. I read your work on [topic]. We're planning a small feasibility study of whether children aged 9–12 can use the change-one-thing idea in an unfamiliar task. Before we fix the sample and measures, could I ask you 20 minutes of questions?

Posted only with moderator permission

Hello. I'm Sam Quansah from Algo Peers, which runs hands-on learning for children in Ghana. With the moderators' permission, I'm asking facilitators who run sessions for 9–12-year-olds about a recent session: what happened, what got in the way, and how you judged what each child could do afterwards. A 15-minute call or a voice note would help. There's nothing to buy.

Hi [Name], I'm Sam Quansah from Algo Peers in Ghana, where we run children's physical-computing sessions. I'm researching how practitioners notice whether a child has understood an idea, like testing one change at a time, rather than just finishing the build. Could you describe the last time you weren't sure? A reply, voice note or 15-minute call would be welcome.

Hello. I'm Sam Quansah, founder of Algo Peers. With the moderators' permission, I'd like to hear from parents of 9–12-year-olds about a recent time your child made or investigated something, and how you could tell what they understood, especially if an app or AI helped. I'm not contacting children. A 15-minute conversation with you would help.

Interview Notes

DISCIPLINED ENTREPRENEURSHIP

STARTUP TACTICS

Interview notes (3 of 3): the system we use to track PMR conversations

Tool ready

Every conversation is logged the same day in our [PMR CRM on Google Sheets](#). It holds the outreach pipeline, each interview's notes, the insights grid and a dashboard.

Notes captured per interview: role and setting · the problem in their words · workaround and its cost · how often it happens · who buys and how budget is approved · response to the pilot idea · next step · ratings for problems P1–P5 (0–3).

Privacy: participants are logged by role and ID, never by name. We speak only with adults, with consent.

Screenshots of the completed notes are added here after the interviews (30 Sep – 6 Oct).

Market Research

Team NBC (Next Billion Children)

Key Findings

DISCIPLINED ENTREPRENEURSHIP

STARTUP TACTICS

Key findings so far

Secondary · sourced

- **The market is large:** after-school programmes are a \$29–53B global market (2025 estimates).
- **The need is real:** 70% of 10-year-olds in low- and middle-income countries can't read a simple text ([World Bank](#)).
- **Answers are getting cheap:** AI tutoring gave about 0.37 SD maths gains in Ghana ([Rori trial](#)), so NBC must win on hands-on capability, not tutoring.
- **Where buyers are:** Ghana networks are organisation-led (Ghana Code Club, GRAF, libraries), so introductions beat posts; Cape Coast owners have no online group, so we meet them in person.

Primary findings: scheduled. The consolidated findings from the 10 interviews are due Wed 7 Oct.

Sources: [benchmarks](#) · [watering_holes](#) · [findings_tracker](#)

Insights grid (1 of 3): participants 1–5, five problems

Insights Grid

DISCIPLINED ENTREPRENEURSHIP
STARTUP TACTICS

Insights grid (3 of 3): how we read the results

Rating: 0 not raised · 1 raised when asked · 2 raised with an example · 3 raised unprompted, with a recent example.

Confirmed problem (set in advance): 6 or more of the 10 rate it 2 or higher, including at least 3 of the 5 buyers.

Callouts after 6 Oct: how many of 10 rate each problem 2+, shown by segment (buyers, users, hosts, researchers) and never averaged across segments.

Sources: [insights.grid](#)

Market Research Team NBC (Next Billion Children) Tactical Playbook

DISCIPLINED ENTREPRENEURSHIP STARTUP TACTICS

How does this tactic relate to your business?

It decides our first customer and problem. Our plan depends on one recurring problem and one buyer, confirmed by people outside our network.

How does this tactic relate to previous tactics?

It builds on our segmentation, personas and 24-step business plan. Earlier desk research and simulated rehearsals shaped the questions; these interviews test them with real people.

What steps did you take to execute this tactic?

1. Defined segments and who counts as a qualified participant.
2. Mapped 20 watering holes from sources and picked 10.
3. Wrote the problem interview script from our hypotheses.
4. Drafted 10 first outreach messages.
5. Revised them into 10 v2 messages.
6. Scheduled sends (28–29 Sep) and 10 interviews (30 Sep – 6 Oct).
7. Built the tracker and insights grid in our CRM.
8. Set a pass rule for confirming each problem in advance.

Sources: [v5 playbook](#) · [24 steps tracker](#)

How can this tactic advance your business?

It feeds our first pass line: offers to 10 qualified buyers by Tue 20 Oct and 3 paid commitments by Tue 10 Nov.

How can you leverage this tactic in the future?

The same watering holes will recruit pilot sites, outside facilitators and a contrasting research site.

Venture update: what we built this week

- [NBC venture repository](#): thesis v5, brand guide and strategy, marketing plan with 20 sourced watering holes, the interview script and outreach messages, forecasts and benchmarks, milestones and dated deadlines.
- [Investor repository](#): a 27-slide pitch deck, a website prototype, the brand guide and a concept demo of a Learning World.
- [PMR CRM on Google Sheets](#): a sales funnel (prospecting, leads with BANT qualification, opportunities), team roles, a notification center with email off until an admin confirms recipients, contact profiles and linked documents, with 12 automated tests.
- **This tactical playbook**, with every slide linked to its source.

Sources: [repository](#) · [CRM guide](#) · [investor deck](#)

Venture update: TNT build night and accelerator application

Applied · decision pending

- Joined the TNT build night.
- **Applied to the TNT accelerator:** \$200,000 pre-seed investment for 2.5% equity, which implies an \$8M post-money valuation.
- **Status:** application submitted; decision pending.
- **What we shared:** the [investor repository](#) with our pitch deck, website prototype and brand guide.

Sources: [investor repository](#)

Venture update: Learning Worlds are designed experiences

Each Learning World runs in four phases: **Belong** (a story and a real problem from the child's world), **Investigate** (build with micro:bit, sensors and everyday materials), **Understand** (predict, test, explain, revise) and **Apply** (build for someone real and show the skill in a new situation).

Already run by Algo Peers, Farm World: 51 learners aged 7–15 from 34 communities (53% girls) built 7 working prototypes for food security. These are participation and outputs, not a measured learning effect.

Sources: [thesis v5](#)

Venture update: market size and five-year scenarios

- **TAM \$29–53B:** global after-school programmes (2025 industry estimates).
- **SAM ~\$99M:** Ghana's ~27,400 primary and junior high schools at \$3,600 a site a year.
- **SOM \$3.2M in year 5:** 800 sites in the central scenario (low \$0.36M, high \$11.3M).

Projections from stated assumptions, not forecasts; rebuilt from pilot data.
